

New add-on

i2 Explore

i2group.com/solutions/i2-explore

Fast-track to intelligence for iBase and Analysis Hub.

An intelligence exploration tool to empower operational teams.

i2 Explore provides users with quick and easy direct access to an organization's intelligence repository and a seamless "360-view" of targets, without relying on trained analysts. This intuitive interface integrates with iBase and Analysis Hub allowing users to answer common questions quickly and easily and accelerate decision making within investigations.

i2 Explore provides vital support to operational police units, specialist investigation teams, detectives, control room staff, and intelligence units.

Perform searches on demand without waiting for analytical support.

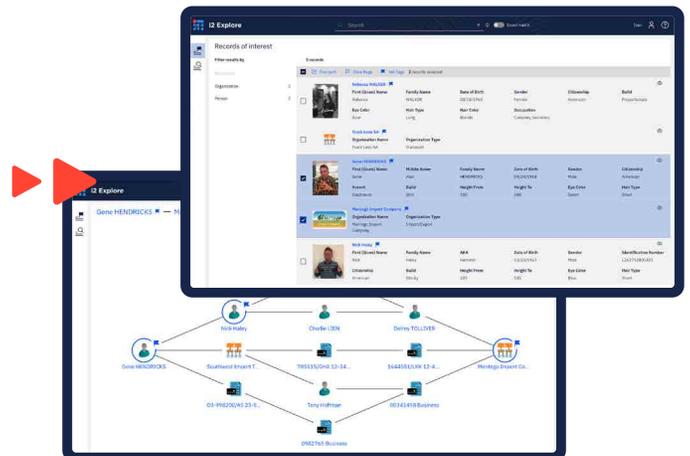

Speed up operational planning, risk assessments and officer response.

Identify real-time data and connections for live incidents.

Highlights

- Extends the reach of intelligence data to untrained users
- Enables faster link and relationship discovery
- Reduces interruptions for analysts
- Configurable to answer everyday questions instantly

Product Summary

i2 Explore in conjunction with iBase and Analysis Hub.

High speed deployment

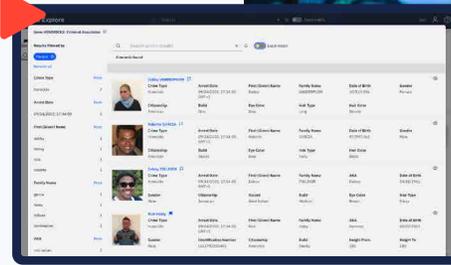

Accessed via a web browser with no user installation, training or data analysis knowledge required, i2 Explore is a cost-effective and intuitive tool that allows users to be operational immediately.

Instantly accessible insights

With direct access to data, operational teams can filter search results by entity for easy selection, flag and add to records of interest and chart to explore important links. A person of interest can be shared with a colleague, who also has access to the tool, via a simple URL.

Seamlessly secure

With read-only access to iBase or Analysis Hub from any web browser, users can confidently explore data without risk of removing or altering data. i2 Explore is underpinned by the iBase or Analysis Hub security model.

Intelligently configurable

Analysts can configure the most commonly asked queries at deployment into customized views for easy access. Users can flag search results for future reference.

Direct access to intelligence can improve investigation efficiency for both the analyst and operational team.
